

October 5, 2015

The Honorable Bill Shuster  
Chairman  
Committee on Transportation and Infrastructure  
2165 Rayburn House Building  
Washington, DC 20515

The Honorable Peter Defazio  
Ranking Member  
Committee on Transportation and Infrastructure  
2163 Rayburn House Building  
Washington, DC 20515

The Honorable Jeff Denham  
Chairman  
Subcommittee on Railroads, Pipelines,  
and Hazardous Materials  
B-376 Rayburn House Building  
Washington, DC 20515

The Honorable Michael E. Capuano  
Ranking Member  
Subcommittee on Railroads, Pipelines,  
and Hazardous Materials  
2163 Rayburn House Building  
Washington, DC 20515

Dear Chairman Shuster, Ranking Member Defazio, Subcommittee Chairman Denham, and Ranking Member Capuano:

On behalf of our members and the agriculture community, we write to express our strong support for H.R. 3651, the Positive Train Control Enforcement and Implementation Act.

Congress required rail carriers to install PTC technology by the end of this year. While progress has been made, the American Association of Railroads, Government Accountability Office, and the Federal Railroad Administration have made it clear that the vast majority of rail carriers will not meet this deadline. What makes this issue so urgent is statements made by rail carriers that, absent a PTC deadline extension, they will not ship certain materials on lines where PTC technology is not yet implemented. Failure to secure an extension by October 31, 2015, will have severe and far-reaching consequences. We want to highlight how this could impact agriculture and the farmers who rely on the safe and timely delivery of products that help them grow the food that feeds the world.

One of the products that would be negatively impacted is anhydrous ammonia, a nitrogen fertilizer and one of the most widely used crop nutrients. In 2014, about 16,000 tank cars, each carrying 80 tons of anhydrous ammonia, shipped in the United States. There are not enough tank trucks in existence to handle this volume.

Anhydrous ammonia is applied directly to crops, used in the production of phosphate fertilizers, and is the building block of all nitrogen fertilizers. Approximately 80 percent of all fertilizer used in the U.S. is affected. Farmers, by extension, will be hurt by the lack of availability of these necessary crop inputs. Research confirms that 40-60 percent of crop yields are attributable to the nutrient inputs of fertilizers. Hence its value to the farmer. The inability to produce or deliver crop nutrients to farmers will negatively impact crop yields and food supply.

A service stoppage would also force fertilizer manufacturers to curtail or cease production. Manufacturers have only limited storage capacity at their facilities, and therefore must ship anhydrous ammonia and other products year-round to continue production and “work within the capacity constraints of the transportation network.”<sup>1</sup> Without access to rail transportation, on-site storage would quickly reach capacity. Because

facilities typically operate at full capacity, these production losses cannot be made up at a later date, and could result in nationwide shortages of crop nutrients.

As farmers at the April 10, 2014, Surface Transportation Board (STB) hearing on rail service testified, timely fertilizer shipments are a very serious concern. An effective rail transportation system is critical each and every day to ensure farmers have what they need, when they need it.

We encourage all of your colleagues in the House to support H.R. 3651 and to enact this legislation no later than October 31<sup>st</sup>. Serious logistical decisions, including manufacturing facility closures and removal of tank cars from the rail system, must be made well before December, requiring that this issue be addressed as soon as possible.

Sincerely,
